

You are in a Qfly Quarantine Area

Your role in eradicating Qfly

If you sell host plants, host fruit or fruiting vegetables in the Red or Orange Zone of the Quarantine Area there are steps you must take to prevent infestation or further spread of Qfly:

- Keep host fruit and fruiting vegetables inside vehicles, buildings, or **covered** with plastic wrap, tarpaulins, hessian, mesh, or other coverings to prevent infestation by Qfly.
- Remove host fruit from host plants before passing through or leaving the Quarantine Area.

[See over for further details](#)

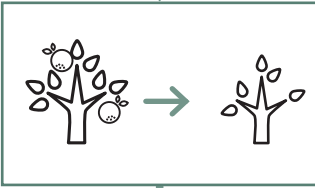

Manage Qfly host fruit to reduce the Qfly risk to WA

If you sell

Host plants

Remove fruit from the plant

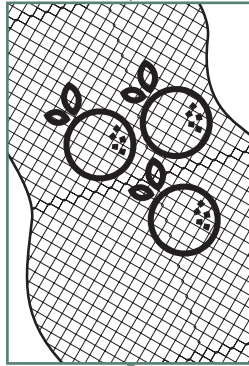

Host fruit or fruiting vegetables

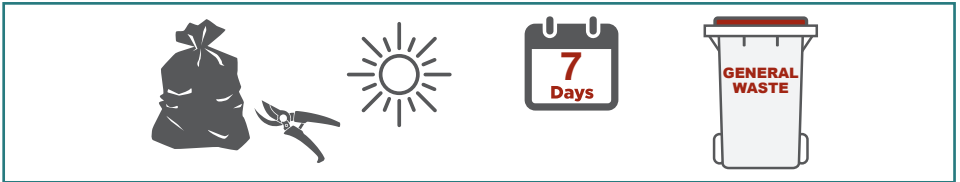

Keep covered

OR

Treat

Treat and dispose of fruit waste
